DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "tetragonal structure" and the "primary particle size" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 6-20 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 6-20 have not been further treated on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "and/or". It is unclear which elements are necessary and which elements are optional.

Claim 3 recites the limitation "in particular as claimed in claim 1". As written, it is unclear what part of the structure of claim 1 is incorporated into claim 3. Claim 3 repeats many of the structural elements of claim 1.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Masaki et al USP 4742030.

Masaki discloses a similar device consisting:

Re clm 1:

- At least one rolling body (col 21, line 1)
- Zirconium dioxide stabilized with an additive (col 7 lines 40-41)
- Zirconium dioxide having at least partially a tetragonal structure (abstract)
- At least the surface of the rolling body consists of zirconium dioxide that is stabilized with MgO, CeO₂, and/or Sc₂O₃ (col 7, line 40)

Re clm 2:

- The zirconium dioxide has a primary particle size of less than 300 nm, preferably of less than 100 nm (fig 2)

Re clm 3:

- At least one rolling body (col 21, line 1)
- Zirconium dioxide stabilized with Y₂O₃ (col 7, line 41)
- Zirconium dioxide having at least partially a tetragonal structure (abstract)
- The zirconium dioxide has a primary particle size of less than 300 nm, preferably of less than 100 nm (fig 2)

Re clm 4:

- Relative to its mass, at least half of the zirconium dioxide has a tetragonal structure (Example 2, col 12)

Re clm 5:

- Almost the entire zirconium dioxide has a tetragonal structure (Example 2, col 12)
